Creating a Table of Contents and List of Figures
Between “\begin{document}” and “\mainmatter” insert:

```
\frontmatter
\tableofcontents
\listoffigures
```

We might as well make the bibliography appear in the table of contents (chapters, sections, and appendices are automatic). Paste the following in just before “\bibliographystyle{phBYU}”:

```
\addcontentsline{toc}{chapter}{Bibliography}
```

Creating Appendices
Just before “\end{document}” insert:

```
\appendix
\chapter{Title}
```

Appendix text goes here (if one is needed). You can insert as many appendices as you want.

Creating an Index
Before “\begin{document}” insert:

```
\usepackage{makeidx}
\makeindex
```

Just before “\end{document}” and after the appendix insert:

```
\addcontentsline{toc}{chapter}{Index}
\printindex
```

In order to make entries appear in the index, you will want to place markers throughout your document. At any place in your text, choose a word \index{word} that is to appear in the index. It does not need to exactly match the text that is marked. Keep in mind that LaTeX is case sensitive.
